AI DISCLOSURE FORM

Use of Generative Artificial Intelligence Tools for the Final Project

This form must be submitted together with the project. Failure to provide this form, or providing incorrect or incomplete information, is considered a breach of academic integrity rules and will be treated according to the university's regulations.

1. Identification details

Full name (Student/Team members)	Svetlana Shustrova
Student ID / Group / Year / Programme	PSCL59/group 2/ 1 year bachelor/ Psychology – cognitive science
Institutional email address	svetlana.shustrova10@e-uvt.ro
Course	1 year bachelor, Psychology – cognitive science
Project title	Habit tracer
Submission date	13.02.2026

2. AI tools used

List each tool you used. If you did not use AI, write "NO AI USED" in the first row and sign the declaration.

Tool (name) + model/version (if known)	Provider	Access (web/app/API)	Approx. dates	Link (optional)
ChatGPT	OpenAI	Web page	~10.02.2026	https://chatgpt.com/share/698b0680-1a50-800e-88a7-7df32cbeb7f3

Add rows as needed.

3. How AI was used (tick all that apply)

☐ Brainstorming / project planning (ideas, architecture, algorithms).

☐ Concept explanations / clarifying theory (syntax, libraries, complexity).

☐ Generating code snippets (functions, scripts).

West University of Timișoara

■ Debugging (identifying errors, interpreting tracebacks, proposing fixes).

■ Refactoring / optimization / style (typing, reorganizing files).

☐ Generating tests (unit/integration), test cases, test data.

☐ Documentation (comments).

☐ Other (describe): _____

4. Detailed record (mandatory)

For each relevant use, complete one row in the table below. The purpose is traceability: what you asked, what you received, what you kept, and where it appears in the project.

No.	Task / problem	Prompt (summary) / AI input	AI response (summary) / generated output	What you integrated & how you validated/modified (tests, reasoning, sources)
1	Errors correction	I have asked ChatGPT to check my code that has been logically constructed and needed to check the startup without errors, especially without syntax errors	artificial intelligence checked my code and revealed a number of syntax errors as well as a block of an incorrectly functioning test.	I fixed syntax errors that caused the code to work incorrectly (the presence of quotation marks in the code output in the final part) I also fixed an error related to the «main» module (the questionnaire and its results were calculated outside of this module and they were in no way related to each other)
2	Unittest correction	When developing the unittest, I encountered the problem of running it - the code did not work with the program for which it was originally written. I asked the chat to check the test.	the chat revealed an error in writing the test (the "high" parameter was not read by the program as the same as "high adherence")	I was remained unsatisfied with the written test. I did not want to use the AssertEqual function recommended by the chat (even though it is truly a useful method to solve this problem: to use python library). Therefore, I decided to leave the first test as a draft and write a second one, as primitive as possible, but with absolute accuracy, working test.

Add rows as needed. If you used AI extensively, you may attach a separate log (PDF/TXT) and reference it here.

5. Declaration

By signing, I declare that:

- The information provided in this form is complete and accurate.
- I critically reviewed any AI suggestions/outputs (correctness, security, licensing, compatibility, quality).
- I take full responsibility for the project content.
- I understand that omitting this form or providing incorrect/incomplete information may be treated as an academic integrity violation under university regulations.

6. Signature

Full name(s)	Svetlana Shustrova
Signature	
Date	13.02.2026
